ABSTRACT:

PURPOSE: To provide a turf-growing mat enabling efficient and easy growth of turf while preventing the proliferation of weeds and the contamination of soil, etc.

CONSTITUTION: This turf-growing mat is composed of an upper layer 1 produced by mixing turf seeds in bark flour and bonding with an adhesive, an intermediate layer 2 containing a cushioning organic material such as wood chips, barley straw and rice straw and produced by bonding the organic material with an adhesive and pressing the product and a water-permeable lower layer 3 having gap to enable the passage of the turf root or forming gaps by the lapse of time. Turf can be grown without necessitating much labor and the growth of weeds can be minimized by the use of the mat.
